

# Stay on Track™

## Flight Tracking Capabilities

The Aircraft Data Management (ADM) solution by UTC Aerospace Systems offers the security of continuous in-flight position monitoring and aircraft health reporting.

Our comprehensive ADM solutions offer cost-effective integration and upgrade capabilities while providing a reliable compliance pathway for potential future mandates.

- Unique ability to seamlessly communicate with preferred SATCOM or ACARS providers
- In the event of an incident, automated distress monitoring increases data acquisition and position transmission
- In-flight diagnostics alert mechanics in advance so the aircraft spends less time on the ground
- Builds on proven, certified ADM hardware
- Patent pending
